

# ExtendScript Toolkit CS6 ReadMe

---

## 1. Overview

This document contains a list of new features, changes, and known issues in this ExtendScript Toolkit CS6 (ESTK) release. It also describes a few hidden gems, like additional Preferences settings.

## 2. Updates in CS6

The ExtendScript Toolkit comes with a number of improvements related to its usability:

- Added “Reveal in Explorer” menu option for documents open in ESTK.
- Added `app.clc()` to clear the console while executing a script with “ExtendScript Toolkit CS6” as target.
- Theme and UI changes
- Bug fixes.

### 2.1. Document backup preference

The ESTK provides the ability to automatically back up documents whenever you modify them in any way. The Documents section of the Preferences dialog now provides the option *Backup documents automatically*. By default, the option is off.

When you select this option, you must also set a value for *After \_\_\_ seconds*. This is the number of seconds to wait after making a change before creating the backup. The delay period begins when you modify a document; if you open a document and do not modify it, no backup is created. If you make another modification after the backup is created, the backup file is updated.

When you start a debug session, all open documents are backed up, regardless of their modification state.

#### 2.1.1. Backup files

Backup files are created in the `backup/` folder, which is a subfolder of `Preferences/`:

- In Windows: `User Folder\Application Data\Adobe\ExtendScript Toolkit\3.6\backup`
- In Mac OS: `User Folder/Library/Preferences/ExtendScript Toolkit/3.6/backup`

The backup file names concatenate the marker `BK`, a unique identifier and the actual document name, separated by `#`. For example: `BK#12345#chromeless FlashPlayer.jsx`

If backup files are available, they are listed in the **Files > Recent Files** menu with their complete name.

When you save a modified document, the backup file for that document is removed. When you quit the ESTK normally, all backup files are removed.

If the ESTK exits abnormally, the backup files cannot be removed automatically, and remain in the `backup/` folder. When the ESTK is started again, they are listed in the **Files > Recent Files** menu, and you can open them to recover the content and save it properly.

## 2.2. Hidden preferences

The ESTK contains a few hidden settings. These settings can be edited manually by editing the Preferences template file `defs.xml`. The file is located here:

- In Windows: `{Program Files}\Adobe\Adobe Utilities - CS6\ExtendScript Toolkit CS6\Required\defs.xml`
- In Mac OS: In `/Applications/Utilities/Adobe Utilities - CS6/ExtendScript Toolkit CS6.app`, control-click the application icon and select "Show Package Contents" to open the package. The file is located here:  
`Contents/SharedSupport/Required/defs.xml`

After editing the file, start the ESTK while holding the Shift key down. This reverts to the default preferences by loading this file. Note that this also removes any keyboard shortcuts, favorites, and so on, that you have set.

**Note:** As in previous releases, you can press and hold the Shift key during startup to avoid loading preferences, and during shutdown to avoid saving preferences.

### 2.2.1. Enable a confirmation dialog before debugging

To enable a confirmation dialog asking to "Save this file?" before debugging, set this tag in the `defs.xml` file to **true**:

```
<debug><saveBeforeDebug>false</saveBeforeDebug></debug>
```

### 2.2.2. Results in status bar

By default, the ESTK displays the result of the execution of a script in both the status bar and the Console. To display the result only in the status bar, set this tag in the `defs.xml` file to **false**:

```
<printResult>false</printResult>
```

## 3. Known Issues: ESTK

This section explains a few limitations in this version of the ESTK which may be addressed in a future release.

### 3.1. Cross-Suite Script Debugging Not Supported

Although it is possible to target a non-CS6 application and run it from the ESTK CS6, such a cross-suite scripting workflow is not supported. The script may or may not execute as expected within the target application.

### 3.2. UTF-8 signature saved in files

By default, the ESTK writes a UTF-8 signature at the beginning of all saved documents. This can cause issues for editors other than the ESTK (such as Word Pad) if that signature cannot be properly interpreted when the file is read into one of those editors. To change this default behavior, change the setting in the

UTF-8 Signature section of the Documents page of the Preferences dialog to the “Never write signature” option.

### 3.3. Favorites

Aliases are displayed as files in the Scripts pane if the JSX file filter is not used. Aliases to files must also have the same extension in order to display in the Scripts pane.

### 3.4. Window placement

The ESTK attempts to adjust itself to the current layout of the desktop, including multiple screens. It cannot detect that a screen has been added or removed without the user having notified the operating system first by using the Desktop Properties (Windows) or System Preferences (Mac OS). Also, it attempts to adjust its window size to a new desktop size when it detects that the desktop has changed between program runs. There are circumstances, however, where manual adjustment of the ESTK's windows is necessary.

### 3.5. Windows font support

The Preferences panels cannot display East Asian characters if East Asian language support is not installed in Windows. Also, it cannot display files containing East Asian characters correctly if that package is not installed.

### 3.6. Comments in preprocessor directives

The ESTK does not allow comments after a preprocessor directive such as `#target`. The comment causes an "... undefined!" error message.

### 3.7. Unrepaired link to target application

When the ESTK is launched and a target application is selected from the drop-down list, if the application is not already running, the ESTK asks whether the target application should be launched. After answering yes, even if the target application is successfully launched, the link next to the target application name in the ESTK remains broken. Click the green "Run" button to fix the link.

### 3.8. Viewing scripting document in non-English OS

If you run the ESTK on one of the supported non-English OSs (French, German, Italian, Japanese, and Spanish) and the ESTK Language preference is set to Default, the “Adobe Intro to Scripting” document on the Help menu is shown in English. To view the document in the appropriate language, set the Language from the **Edit > Preferences** menu to the OS language.

### 3.9. Application missing from target list

In rare circumstances due to some unlikely product installation scenarios, the name of an installed target application may not show up in the ESTK dropdown list. If the name of the desired target application is

not shown in the list, the script to be executed must contain a `#target` directive that specifies the target application.

### 3.10. Extended input

The ESTK does not fully support Extended Input to enter non-Roman characters (such as Japanese). Reconversion is not supported.

### 3.11. Compiled scripts

If a script is compiled to a `.jsxbin` file, the `#target` directive is ignored. Double-clicking a `.jsxbin` file does not execute the script in the application that the `#target` directive defines.

## 4. Known Issues: ScriptUI Programming

---

This section explains known problems encountered in ScriptUI programming, which may be addressed in a future release.

### 4.1. “Nested” modal dialogs

The following sequence of operations using dialog (modal) windows is illegal, and will result in an application crash (assuming the script created two separate dialog windows - `win1` and `win2`):

```
var result1 = win1.show();
win1.hide();
    /* Create and show a nested dialog */
    var result2 = win2.show();
    win2.close();
win1.show();
win1.close();
```

As noted in the JavaScript Tools Guide document, calling `hide()` for a dialog window does not only change the window's visibility; it is equivalent to calling `close(0)`, which removes the window from its modal state. If the script calls `show()` a second time for this window to make it visible again, the application is likely to crash when the window is finally closed. If your script requires the use of "nested" modal dialogs, use a sequence like this instead:

```
var result1 = win1.show();
    /* Create and show a nested dialog */
    var result2 = win2.show();
    win2.close();
win1.close();
```

### 4.2. Application-specific appearance and behavior

When using the ESTK to develop scripts targeted at Adobe Photoshop® CS6 or Adobe After Effects® CS6, you will notice differences in the appearance of ScriptUI content created by running a script directly in the ESTK, and content created by running the script in the application.

The ESTK uses a different version of ScriptUI than Photoshop and After Effects.

- In the ESTK, user interface elements are created and managed by the operating system; a ScriptUI Button element looks like (and is) a Mac OS X button, or Windows OS button, depending on the platform.
- In the ScriptUI version used by Photoshop and After Effects, user-interface elements are created and managed by the Adobe Flash<sup>®</sup> Player; a ScriptUI Button created by a script run in Photoshop or After Effects has the same appearance on both platforms, not a platform-specific appearance.

You may also notice slight differences between the two ScriptUI versions in the layout of UI elements, and in the behaviors of certain UI elements. These differences are documented in the Scripting documentation distributed with the Photoshop and After Effects applications.

### 4.3. ScriptUI modal dialogs

When programming ScriptUI dialogs, the ESTK ignores breakpoints in callback functions if the dialog is modal and the target engine is the ESTK itself. The modal ScriptUI dialog causes the ESTK to go into a modal state, where most of the user interface is disabled. Therefore, it cannot easily switch back into normal debug mode when a breakpoint is hit.

### 4.4. The ScriptUI FlashPlayer element

- Call `loadMovie()` method only once

When programming the ScriptUI `FlashPlayer` element, use care when calling the `loadMovie()` method: you can call it only once in a `FlashPlayer` instance. Using `'add ("flashplayer", undefined, "SWF to load")'` to create a `FlashPlayer` results in an implicit call to `loadMovie()`. If you need to restart a movie that has already been loaded, you must destroy and recreate the `FlashPlayer` the movie is to run in.

- The `playMovie()` and `stopMovie()` methods are deprecated

When programming the ScriptUI `FlashPlayer` element, do not use its `playMovie()` or `stopMovie()` methods. These methods are no longer functional; calling them is allowed, but they have no effect. Remove calls to them from any scripts for safety in future ScriptUI versions. The `loadMovie()` method loads and starts playing the Flash movie.

- Handling Tab characters in the `FlashPlayer`

The `FlashPlayer` element has a new creation property `letPlayerHandleTabs` which controls how Tab and Backtab (Shift+Tab) characters are handled when the `FlashPlayer` has the keyboard focus.

- If `letPlayerHandleTabs` is defined with a `true` value, Tabs are sent to the `FlashPlayer` element, so ActionScript code running in the player can handle them (or not).
- If `letPlayerHandleTabs` is undefined or `false`, Tab and Backtab are treated as keyboard navigation cues to move the keyboard focus to the next or previous element in the tab sequence. This is the normal ScriptUI behavior.

These examples create a `FlashPlayer` element that handles Tab and Backtab characters:

```
var fp = w.add ("flashplayer",undefined, <SWF to load>,
{letPlayerHandleTabs:true});
```

Or using the resource format:

```

var resourceDef = ""palette {
    fp: FlashPlayer {
        properties:{ letPlayerHandleTabs:true }
    }
}""";
var w = new Window (resourceDef);
w.fp.loadMovie (<pathname, URL, or File object for SWF file>);

```

#### 4.5. Interaction of window-closing shortcut with ESTK

The ExtendScript Toolkit uses the shortcut key `CTRL+W` (Windows) / `CMD+W` (Mac OS) to close the topmost document window or the OMV. When executing a script that implements a window in ScriptUI which defines `closeOnKey: 'OSCmd+W'`, pressing that key combination would never affect the ScriptUI window, although it would close the topmost document or OMV.

## 5. Third Party Legal Notices

---

This product may include software licensed under terms that requires Adobe to display the following notices.

---

This formulation of W3C's notice and license became active on December 31 2002. This version removes the copyright ownership notice such that this license can be used with materials other than those owned by the W3C, reflects that ERCIM is now a host of the W3C, includes references to this specific dated version of the license, and removes the ambiguous grant of "use". Otherwise, this version is the same as the previous version and is written so as to preserve the Free Software Foundation's assessment of GPL compatibility and OSI's certification under the Open Source Definition. Please see our Copyright FAQ for common questions about using materials from our site, including specific terms and conditions for packages like libwww, Amaya, and Jigsaw. Other questions about this notice can be directed to [site-policy@w3.org](mailto:site-policy@w3.org).

The authors gratefully acknowledge the support of GeNeSys mbH & Co. KG in producing this work.

533 Permission to use, copy, modify, distribute, and sell this software and its documentation for any purpose is hereby granted without fee, provided that the above copyright notice appear in all copies and that both that copyright notice and this permission notice appear in supporting documentation, and that the name of M.I.T. not be used in advertising or publicity pertaining to distribution of the software without specific, written prior permission. M.I.T. makes no representations about the suitability of this software for any purpose. It is provided "as is" without express or implied warranty. Calling this script `install-sh` is preferred over `install.sh`, to prevent 'make' implicit rules from creating a file called `install` from it when there is no `Makefile`.

This script is compatible with the BSD `install` script, but was written from scratch. It can only install one file at a time, a restriction shared with many OS's `install` programs.

722 Source code version of the AAF technology is available under the terms of the AAF license.

- 905 This source code was modified by Martin Hedenfalk <mhe@stacken.kth.se> for use in Curl. His latest changes were done 2000-09-18.

It has since been patched away like a madman by Daniel Stenberg <daniel@haxx.se> to make it better applied to curl conditions, and to make it not use globals, pollute name space and more. This source code awaits a rewrite to work around the paragraph 2 in the BSD licenses as explained below.
